

About

I help businesses turn data into measurable results. With a background in Mathematics and Statistics, I use Excel, SQL, and Python to transform raw data into insights that improve performance and guide strategic decisions.

I build dashboards and reports that track key metrics in real time, enabling faster, data-driven decisions. Through predictive modeling and forecasting, I've worked on projects (including customer churn analysis) to identify key drivers of retention and reduce risks like stockouts—helping improve operational efficiency and customer satisfaction.

I focus on delivering insights that don't just explain what happened, but drive what to do next—turning data into clear actions that impact revenue, efficiency, and growth.

DATA SCIENTIST

Turning Data into Insights. Powering Decisions.

- AI-Driven Solutions
- Accurate & Reliable
- Insightful Visualizations
- Quality Assured

- Image & Text Data Labeling
- Annotation Quality Assurance
- Fast, Accurate Data Entry
- Database & Records Mgmt
- Dashboards & Visualization
- Statistical & Trend Analysis
